Clobex® (clobetasol propionate) is a topical corticosteroid used for short periods of time to reduce the itching, flaking, scaling, redness and inflammation of skin conditions on the body and scalp such as psoriasis, eczema, dermatitis.

Clobex® comes in three formulations for convenient, effective skin treatment:

- Spray: For treatment of moderate to severe plaque psoriasis
- Shampoo: For scalp psoriasis
- Lotion: For treatment of corticosteroid responsive dermatoses (SRDs), such as eczema and dermatitis.

Psoriasis is a disorder in which skin grows and replaces itself too rapidly, causing a buildup of red, thickened areas with silvery scales. The National Institutes of Health estimates between 5 and 7.5 million people in the U.S. have psoriasis. Psoriasis usually develops in adults on the scalp, elbows, knees and lower back — and often appears in the same place on both sides of the body. It may affect quality of life since it can be a painful, itchy and sometimes unattractive skin condition in its moderate to severe forms. Eczema, also known as atopic dermatitis, describes a variety of common skin diseases.

It is an itchy, red, flaking, weeping, oozing skin condition.

Clobex® provides clinically proven relief of common symptoms associated with psoriasis and other SRDs, such as:
- Itching
- Scaling and flaking
- Erythema (skin redness and inflammation)
- Plaque thickening

Clobex® (clobetasol propionate) Spray, 0.05% is powerful psoriasis treatment which comes in 2 oz. and 4.25 oz. bottle with a non-aerosol, measured-dose spray. It is the only available superhigh potent corticosteroid formulation that couples clobetasol in a non-aerosol, measured-dose spray. It is indicated for treatment of moderate to severe plaque psoriasis.

Clobex® (clobetasol propionate) Shampoo, 0.05% combines the power of clobetasol with convenience for your busy life. Clobex® Shampoo is applied just once a day for up to four weeks, offering relief from itching and flaking with the daily shower.

Clobex® (clobetasol propionate) Lotion, 0.05% is a super-high corticosteroid potent formulation that is quickly absorbed. It provides the strength of clobetasol cream with the light consistency of a lotion.
